

Resources - Materials

Beneficial Insects-if you want to buy bugs for the garden. Remember though it's better to plant the insectary plants below and attract the bugs.

Rincon Vitova-Ventura **

orderdesk@rinconvitova.com 805-643-5407

Compost Tea Brewers -"Dirt Simple 100" Lotusland's brewer. This brewer comes in many sizes including a small home owners model. Earthfortification is a good company and they all the ingredients used in making compost tea.

www.earthfort.com/shopexd.asp?id=75 541-257-2612

Brewing ingredients also available at Earthfortification(Earthfort.com)

Compost Tea and Tea Analysis

Soil Food Web Inc. This company has been analyzing compost tea for many years.

www.soilfoodweb.com/01_services/01_oregon/index.html 541-752-5066

Gophinator - Gopher Traps (Large and Small) Lotusland's best traps. There are great videos on the trapline website showing precisely how to effectively use the traps.

<http://traplineproducts.com/contact.html>

Lawn Fertilizer/Potted Plants- Par 4 granular fertilizer, very good and easy to apply granular organic fertilizer. Can be used on all plants needing fertilizer. Most organic granular(pelletized) fertilizers like Dr. Earth, Whitney Farms, E.B.Stone, and others are totally fine for general garden use. Just make sure you recognize the ingredients eg. Fish meal vs Ammonium nitrate, Kelp vs Potassium sulfate. If the ingredients have a chemical name don't use it.

All Around Irrigation 805-684-3403 (supplier for Santa Barbara) or order online

Mycorrhizae - MycoApply "MAXX" This product is very easy to sprinkle around the roots at planting. That's all you have to do. Split the price with a couple of friends and you will have plenty for the whole year. Keep in a cool dry place.

www.mycorrhizae.com/index.php?cid=39 (the best producer of mycorrhizae) 1-866- 476-7800

Organic Fertilizer - "Landscape Mix" The best mix available. Original recipe from Dan Bifano(Rosarian). Most organic fertilizers will be similar. Look for alfalfa, soybean, fish meal, and kelp meal based materials.

Island Seed & Feed sells it- Goleta

www.islandseed.com/ 805- 967-5262

Soluble Kelp - "Maxicrop" very easy to dissolve in water.

<http://www.maxicro.com>

Trace Minerals-Azomite"SoilSweetner" an excellent accompaniment to Landscape mix. Just a generous dusting around plants is all you need.

Weed Killers

Avenger-Organic <http://www.restorewisconsin.com/media/NAOBrochure2.pdf>

Suppress- <http://westbridge.com/suppress-herbicide-ec-receives-epa-approval/>

Suppress is very effective and Avenger is harder to get.

Buy Suppress at Crop Production Services on Kellog Ave. in Goleta or order

Plant List from Haagen Daz Honey Bee Haven

1. Some of the plants listed are fruit trees, vegetables, and other edibles. The Haven is working on crops that need good pollination. You can disregard these plants if you're just looking for flowers.
2. The bolded plants are plants that I personally have used successfully but don't hesitate using the others on the list.
3. The soil for all my plantings has been double dug. This means carefully breaking up all planting beds two shovel blades deep at least. I don't dig holes I break up entire areas usually five feet wide by ten feet long.
4. I dig in a 6-8" layer of compost to most beds-sometimes more! You have to be careful though with using this much compost in beautiful loose soil. It's easy to over water the plants. Compost dose a fantastic job of holding water in the soil. Water in new plants checking for dry soil every few days until established (two or three weeks). A good example of are plants that can be touchy with compost and water are plants like Lavender which don't usually like a great deal of organic compost because the soil stays too moist for them-they can rot quickly. Other plants like Verbascum love the compost and moisture. Don't be surprised if a few plants die off suddenly-it's part of learning. As you experiment with compost and mulches eventually you will learn witch plants love the rich soil and which plants hate moist rich soil. Slowly but surely we can group the plants accordingly. The question of soil moisture and compost should be one of the first questions we ask when planting new plants at our house. Most native plants really don't need a lot of organic amending just loose soil and that means lots of digging to break up compaction layers. Mulches on top of the soil are fine for natives.

5. Some of my favorite plants so far in my new garden are: Gillardia ‘Arizona Sun’, Echinacea ‘Magnus’, Nepeta ‘Walkers Low’, Salvia Chamaedryoides, Verbascum ‘Wedding Candles’, Sunflowers, Buddleja cv. Buzz Midnight, Caryopteris ‘Blue Mist’, ‘Dark Knight’, ‘Blue Boa’.
